NOTE			
1. All parameters NOT specially mentioned are measured at 230Vac input, rated load and 25°C of ambient temperature. 2. Derating may be need under low input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details. 3. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uF & 47uF parallel capacitor. 4. Tolerance: includes set up tolerance, line regulation and load regulation. 5. Length of set up time is measured at first cold start. Turning ON/OFF the driver may lead to increase of the set up time. 6. FAN noise test set up according to ISO-7779. 7. The Regulatory Compliance Mark (RCM) is applied on a voluntary basis. The equipment meets the relevant IEC or AS/NZS standards, or AS/NZS 3820 where applicable. The use of the RCM mark complies with AS/NZS 4417.1. 8. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 720mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on https://www.meanwell.com/Upload/PDF/EMI_statement_en.pdf) 9. Some factory or model may not have the BIS logo, please contact your MEAN WELL sales for more information. 10. MOPP is suitable for 100-240Vac input only 11. The ambient temperature derating of 3.5°C/1000m with fanless models and 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft). 12. If use PV signal to adjust Vo, under certain operation conditions, ripple noise of Vo might go over rating defined in this specification. ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

Derating Curve

Suitable for 220/230/240/277Vac System (180~305Vac)

Output Derating vs Input Voltage

■ **Function Manual**

1. Peak Power

$$P_{av} = \frac{P_{pk} \times t + P_{npk} \times (T-t)}{T} \leq P_{rated}$$

$$Duty = \frac{t}{T} \times 100\% \leq 35\%$$

$$t \leq 5 \text{ sec}$$

P_{av} : Average output power (W)

P_{pk} : Peak output power (W)

P_{npk} : Non-peak output power(W)

P_{rated} : Rated output power(W)

t : Peak power width(sec)

T : Period(sec)

For example (24V model)

$V_{in}=220Vac$, Duty_max=5%

$P_{av}=P_{rated}=1000W$

$P_{pk}=2000W$

$t \leq 5sec$

$$T \geq \frac{5sec}{5\%} = 100sec$$

$$P_{npk} \leq \frac{TP_{av}-tP_{pk}}{T-t} = 947.4W$$

Note: When the output voltage is adjusted to the upper limit, the peak power is 150% of rated power

2. Output Voltage Programming (P.V)

- (1) Default by potentiometer (SVR)
 - (a) Have the DIP switch position-3 set as 
 - (b) Output voltage can be trimmed by SVR.
- (2) By Output Voltage Programming
 - (a) Have the DIP switch position-3 set as 
 - (b) The output voltage can be trimmed to 0~120% by applying EXTERNAL VOLTAGE between PV and GND on CN1.

3. Output Current Programming (P.C)

- (1) Default Overload Protection (OLP) value
 - (a) Have the DIP switch position-2 set as 
 - (b) Output current is set default value.
- (2) By Constant Current Level Programming
 - (a) Have the DIP switch position-2 set as 
 - (b) The constant current level can be trimmed to 0~100% of the rated current by applying EXTERNAL VOLTAGE between PC and GND on CN1.

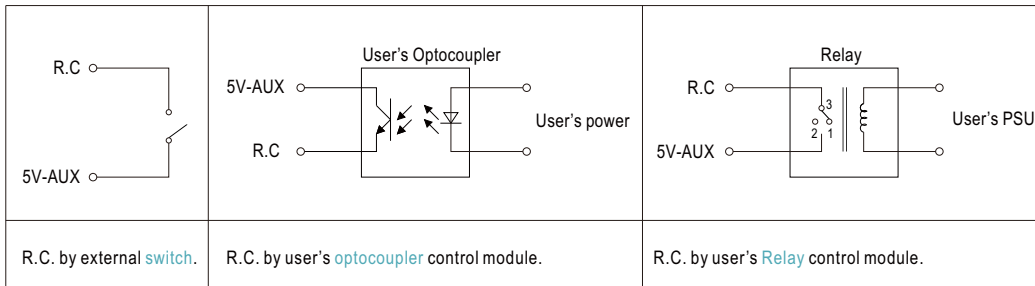

4. Remote Control

※ The power supply can be turned ON/OFF individually or along with other units by using the "Remote Control" function with external switch, photocoupler or relay.

PSU Vo Status	Between +5V-AUX(Pin 2) and R.C(Pin 1)
Power ON	Switch Short
Power OFF	Switch Open

5. Remote Sense

※ The Remote Sense compensates voltage drop on the load wiring up to 0.5Vdc

◎ The +RS signal should be connected to the positive terminal of the load whereas -RS signal to the negative terminal.

6. Local Sense

※ The +RS,-RS have to be connected to the +Vo(signal), -Vo(signal), respectively, as the following diagram, in order to get the correct output voltage if Remote Sense is not used.

7. Paralled Use

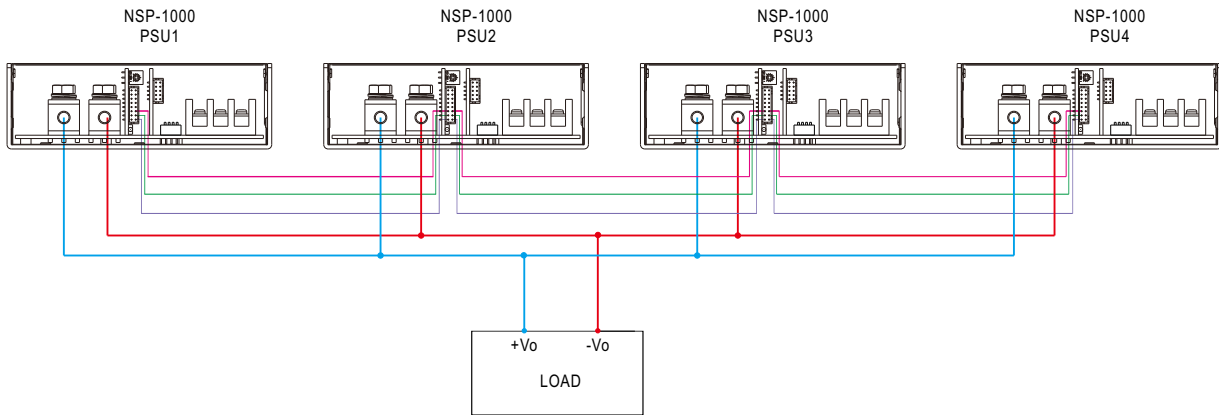

NSP-1000 has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below :

- ※ The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
- ※ Difference of output voltages among parallel units should be less than 0.2Vdc.
- ※ The total output current must not exceed the value determined by the following equation:

$$\text{Maximum output current at parallel operation} = (\text{Rated current per unit}) \times (\text{Number of unit}) \times 0.9$$
- ※ Under parallel operation, the minimum output load should be greater than 5% of total output load; otherwise, it is likely that only one unit operates whereas other units may enter standby mode or their LED status indicators may not turn on.
- ※ When the total output current is less than 5% of the total rated current, or say $(5\% \text{ of Rated current per unit}) \times (\text{Number of unit})$ the current shared among units may not be fully balanced.
- ※ CN1/DIP SW1 Function pin connection

Parallel	PSU1		PSU2		PSU3		PSU4	
	CN1	SW1 POS4	CN1	SW1 POS4	CN1	SW1 POS4	CN1	SW1 POS4
1 unit	X	ON	—	—	—	—	—	—
2 unit	V	ON	V	ON	—	—	—	—
3 unit	V	ON	V	—	V	ON	—	—
4 unit	V	ON	V	—	V	—	V	ON

◎V is CN1 connected to plug pin, X is CN1 not connected to plug pin.

↑
If the lines of CN1 are too long, they should be twisted in pairs to avoid the noise.

◎ DA, DB and GND are connected mutually in parallel.

◎ DA, DB signal and parallel control function

(1) Non-parallel operation

- (a) set the DIP switch of position-4 as
- (b) Disconnect the bus termination resistor

(2) Default parallel operation

- (a) set the DIP switch of position-4 as
- (b) Terminal the bus with a 120 Ω resistor

8. Overload Protection Mode

(1) Peak Load Mode

- (a) Have the DIP switch position-1 as
- (b) Limit current, shutdown after 5 seconds, recover after re-power on.
- (c) Allow 1.5x or 2x peak load for 5 seconds.

(2) Current Limiting Mode

- (a) Have the DIP switch position-1 as
- (b) Limit current.

Note: With P.C function active, Peak Load Mode is disabled and the current limit defaults to the P.C setting.

9. Support CANBus built-in or MODBus(By request) Communication

※ Communication provides function such as control, setting and monitorin , Parameters include output power, input voltage, etc.
