NOTE			
<ol style="list-style-type: none"> All parameters NOT specially mentioned are measured at 230Vac input, rated load and 25°C of ambient temperature. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Tolerance : includes set up tolerance, line regulation and load regulation. Derating may be needed under low input voltages. Please check the derating curve for more details. The efficiency is measured at 75% load. If use PV signal to adjust Vo, under certain operating conditions, ripple noise of Vo might slightly go over rating defined in this specification. FAN noise test set up according to ISO-7779. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 600mm*900mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on https://www.meanwell.com/Upload/PDF/EMI_statement_en.pdf) The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).

FUNCTION MANUAL

1. Output Voltage Programming (P.V)

※ In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed to 50~125% of the nominal voltage by applying External Voltage.

◎ For Remote Sense / Local Sense, please refer to "Voltage Drop Compensation" section.

◎ The rated current should change with the Output Voltage Programming accordingly.

◎ For Remote Sense / Local Sense, please refer to "Voltage Drop Compensation" section.

2. Remote Control

※ The power supply can be turned ON/OFF individually or along with other units by using the "Remote Control" function.

PSU Vo Status	Between +5V-aux(Pin 3) and R.C(Pin 4)
Power ON	Switch Short
Power OFF	Switch Open

3. Voltage Drop Compensation

3.1 Remote Sense

※ The Remote Sense compensates voltage drop on the load wiring up to 0.5Vdc

◎ The +RS signal should be connected to the positive terminal of the load whereas -RS signal to the negative terminal.

3.2 Local Sense

※ The +RS,-RS have to be connected to the +Vo(signal), -Vo(signal), respectively, as the following diagram, in order to get the correct output voltage if Remote Sense is not used.

4. Alarm Signal Output

※ There are 2 alarm signals, DC OK and T-ALARM, in TTL signal form, on CN1. These signals are isolated from output. The maximum sink current is 10mA.

DC OK Fail signal	Power Supply Status
"High" > 3.5~5.5V	$V_{out} \leq 77\% \pm 5\%$
"Low" < -0.5~0.5V	$V_{out} \geq 80\% \pm 5\%$

T-ALARM	Power Supply Status
"High" > 3.5~5.5V	OFF(OTP or Fan Fail)
"Low" < -0.5~0.5V	ON(Normal Work)

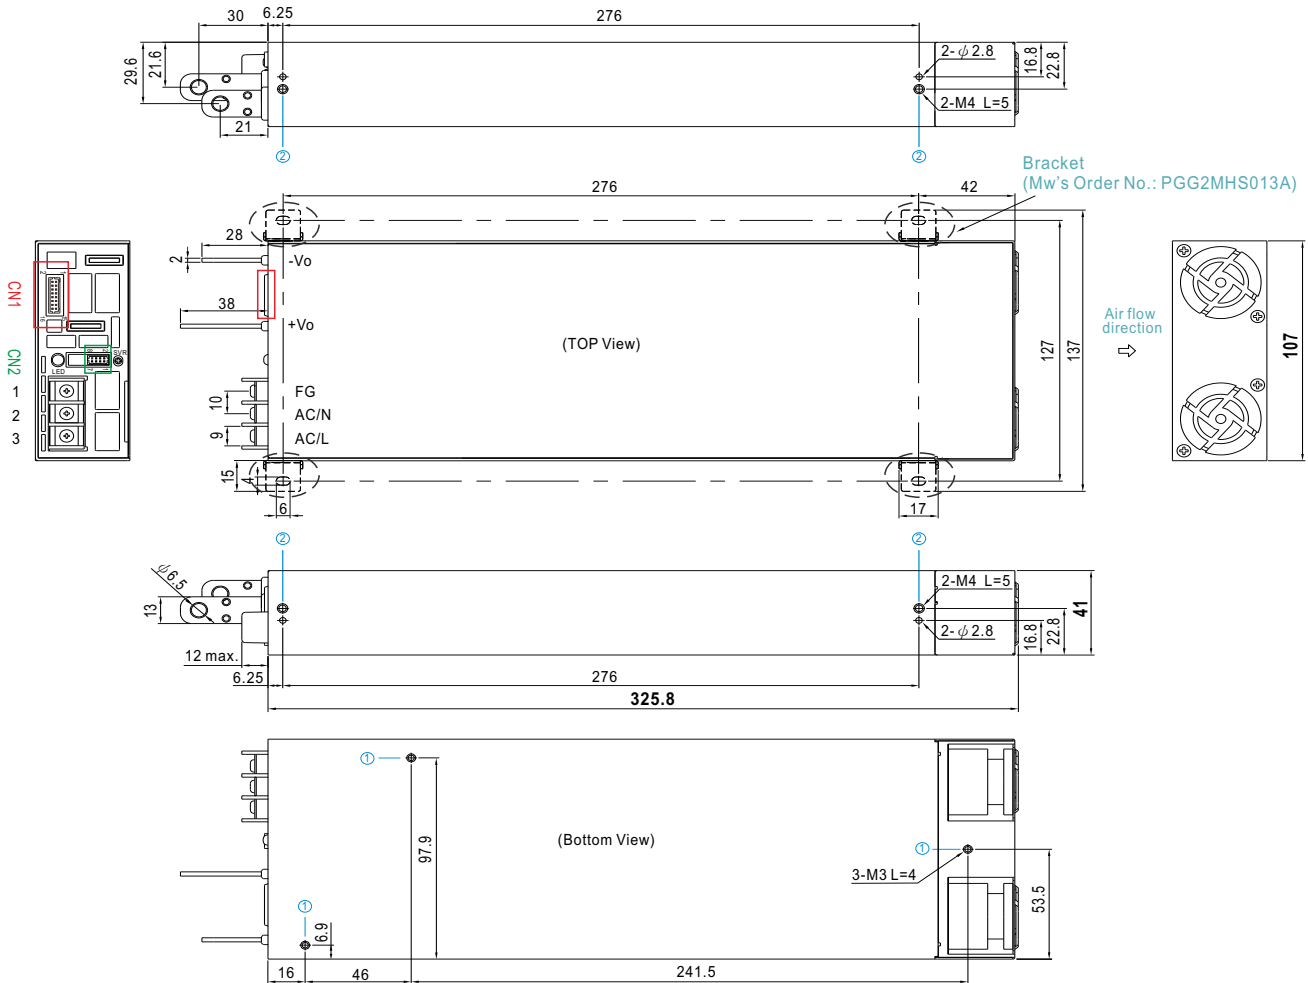

5. CANBus Communication Interface

NSP-3200 supports CAN 2.0B with maximum 250KHz bus speed, allowing information reading, status monitoring, output trimming, etc. For details, please refer to the User's Manual.
