

(Bottom View)

Features

- Quarter-brick(2.28" x 1.45" x 0.5") with industrial standard pin-out
- Compliance with railway standard EN50155
- 12:1(14~160Vdc) ultra-wide input range
- Wide operating temperature range -40 ~ +90°C
- No minimum load required
- Full encapsulated
- Protections: Short circuit (Continuous) / Overload / Over temperature / Over voltage / Input under voltage
- · 3KVDC or 2KVAC I/O isolation
- · Remote ON/OFF control and remote sense
- Triming output(±10%)
- · 3 years warranty

Applications

- · Bus, tram, metro or railway system
- Telecom/datacom system
- · Wireless network
- · Industrial control facility
- Instrument
- Analyzer
- Highly vibrating, heavily dusty, exteremely low or high temperature harsh environment

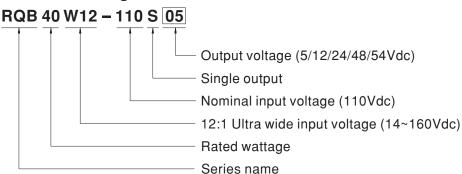

GTIN CODE

Description

RQB40W12 series is 40W module type DC-DC reliable railway with quarter brick package. It features international standard pins, a high efficiency up to 90%, wide working temperature range -40~+90°C, 3KVDC or 2KVAC I/P-O/P isolation voltage, meet EN50155 with external circuits, continuous-mode short circuit protection, etc. The models input for 14~160VDC 12:1 ultra-wide input range, and various output voltage, 5V/12V/24V/48V/54V for single output, which are suitable for railway, trams, buses and also can be used in the harsh environment with high vibration, high dust, extremely low or high temperature, etc.

| NOTE | 1.All parameters are specified at normal input(110Vdc), rated load, 25°C 70% RH ambient. 2.Ripple & noise are measured at 20MHz by using a 12" twisted pair terminated with a 0.1μf & 47μf capacitor. 3.Line regulation is measured from low line to high line at rated load. 4.Load regulation is measured from 0% to 100% rated load. 5.External input capacitor required 330μF/220V. 6.The final equipment must be re-confirm that it still meet EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies."(as available on http://www.meanwell.com) ※ Product Liability Disclaimer: For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx | | | | | | | | | |

40W Quarter Brick 14~160Vdc Ultra-wide Input Railway DC-DC Converter RQB40W12 series

■ External Output Trimming

In order to trim the voltage up or down, one needs to connect the trim resistor either between the trim pin and -Vout for trim_up or between trim pin and +Vout for trim_down. The output voltage trim range is -10% to +10%. This is shown in Figures 1 and 2:

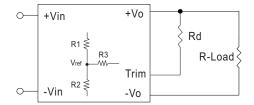

Figure 1. Trim_up Voltage Setup

Figure 2. Trim_down Voltage Setup

1. The value of Rtrim_up defined as:

$$A = \frac{V_{ref}}{V_{o'}-V_{ref}} \times R1$$

$$Rtrim_up = \frac{AR2}{R2-A} - R3$$

For example, to trim_up the output voltage of 5.0V module (RQB40W12-110S05) by 10% to 5.5V, Rtrim_up is calculated as follows:

$$V_{o,nom} = 5V$$

$$V_{0}' = 5.5V$$

$$R3 = 68K\Omega$$

$$A = \frac{V_{ref}}{V_{o'}-V_{ref}} \times R1$$

$$= \frac{1.25}{5.5 - 1.25} \times 30.3 = 8.911$$

$$Rtrim_up = \frac{AR2}{R2-A} - R3$$

$$= \frac{8.911 \times 10}{10 - 8.911} - 68$$

Table 1 - Trim_up and Trim_down Resistor Values

| Model Number | Vo,nom (V) | Vref (V) | R1 (KΩ) | R2 (KΩ) | R3 (KΩ) | | | |
|-----------------|---------------|-------------|------------|------------|------------|--|--|--|
| RQB40W12-110S05 | 5 | 1.25 | 30.3 | 10 | 68 | | | |
| RQB40W12-110S12 | 12 | 2.5 | 12.56 | 3.3 | 24.9 | | | |
| RQB40W12-110S24 | 24 | 2.5 | 17.2 | 2 | 15 | | | |
| RQB40W12-110S48 | 48 | 2.5 | 36.4 | 2 | 15.8 | | | |
| RQB40W12-110S54 | 54 | 2.5 | 41.2 | 2 | 15.8 | | | |

- 1. Rtrim_up, Rtrim_down is mean trim resistor, please check the formula.
- 2.A & B: user define parameter, no actual meanings.
- 3.Vo' is target trim voltage.
- 4. Value for R1, R2, R3 and Vref refer to above table.

2. The value of Rtrim_down defined as:

$$A = \frac{Vo'-V_{ref}}{V_{ref}} \times R2$$

$$Rtrim_down = \frac{AR1}{R1-A} - R3$$

For example, to trim_down the output voltage of 5.0V module (RQB40W12-110S05) by 10% to 4.5V, Rtrim_down is calculated as follows:

 $V_{o,nom} = 5V$

$$V_{0'} = 4.5V$$

R1 =
$$30.3 \text{ K}\Omega$$

$$R2 = 10 K\Omega$$

$$R3 = 68 K\Omega$$

$$A = \frac{Vo'-V_{ref}}{V_{ref}} \times R2$$

$$= \frac{4.5 - 1.25}{1.25} \times 10 = 2.6 \times 10 = 26$$

$$Rtrim_down = \frac{AR1}{R1-A} - R3$$

$$= \frac{26 \times 30.3}{30.3 - 26} - 68$$

= $115.2K\Omega$

■ Hold-up Time

As Figure 3 shows, an electrolytic cap (Cbus) about 47µF connected between Vbus and -Vin is necessary. The Vbus can provide or absorb transient power and make the converter operating stable.

In Figure 4 when input voltage is below 56Vdc, the Vbus voltage will keep at 60V. As the input voltage increase and over 60V, the Vbus and Vin will had the same voltage level.

During the transition of different power source, the electric power on the train become unstable in a short time. Such as a sudden voltage drop or a short-term power failure. Under this situation, hold-up time circuit is suitable for this situation.

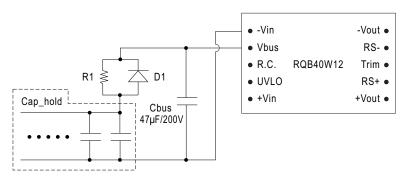

Figure 3 Vbus circuit for hold up Cap

Table 2 – Cap_hold table (Hold up time)

| Nominal Vin | 24V | 48V | 72V | 96V | 110V |
|-------------|--------|--------|--------|-------|-------|
| 10ms(S2) | 800µF | 800µF | 440µF | 180µF | 120µF |
| 20ms(S3) | 1600µF | 1600µF | 800µF | 440µF | 300µF |
| 30ms(C2) | 2200µF | 2200µF | 1200µF | 540µF | 400μF |

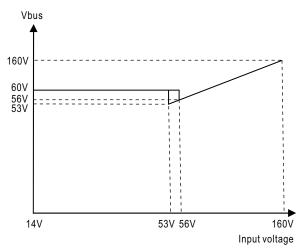

Figure 4 Input and Vbus voltage relationship

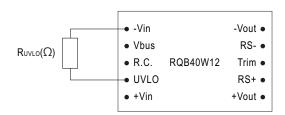

As Figure 3 shows, hold-up time circuit comprises R1, D1 and Cap_hold. The capacity of Cap_hold decides the hold-up time during interruption of input power. And Table 2 shows the table for Cap_hold with different input voltage. For Example, if input voltage is 24V, and output load is full load. The Cap_hold need 800µF for hold-up 10ms.

During start up, R1 endures a high pulse power, and should be selected carefully. The power is related to Vbus and Cap_hold. We recommend to use 25 ohm/10W resistor.

■ UVLO

The under voltage threshold can set by external resistor placed between the UVLO and -Vin. (Please refer to Table 3)

| Table 3 – UVLO | | | | | | | | |
|--|-------|-------|-------|--|--|--|--|--|
| $\begin{array}{c} \text{UVLO} \\ \text{External Resistor} \\ \text{RuvLo}(\Omega) \end{array}$ | OPEN | 140K | 62K | | | | | |
| Shutdown | 12.7V | 19.6V | 26.3V | | | | | |
| Start up | 13.6V | 20.4V | 27.3V | | | | | |

■ Plug Assignment

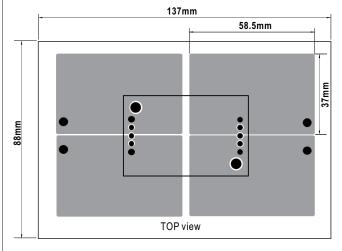

■ Derating Curve

Power Derating Curve

Power module can operate in variety of thermal environments. However, sufficient cooling should be provided to ensure the reliable operation of the unit. Heat can be removed by conduction, convection, and radiation to the surrounding environment. Figure 5 is the PCB layout, which to measure RQB40W12 thermal performed, the dimension is 137 * 88 * 1.6mm, 2 OZ. There copper can help RQB40W12 to conduct heat through the body to the PCB.
